

RYAN KELLY

Principal Software Engineer

-  94ryan.kelly@gmail.com
-  /in/rtkelly94/
-  rtkelly13

Technologies

Overview

Open source projects under organisation **Resultful** for functional .NET.

Speaker on F#, .NET architecture, and functional engineering.

Core & Languages

- C#
- F#
- .NET / Native AOT
- TypeScript / JavaScript
- Python
- SQL

Cloud, Data & Infrastructure

- AWS
- Apache Iceberg
- Apache Parquet
- Pulumi
- Terraform
- Elasticsearch / OpenSearch
- OpenTelemetry (OTEL)

Engineering & Practices

- Roslyn Source Generators
- Compiler Plugins / Type Providers
- CI/CD (GitHub Actions)
- Distributed Systems
- AI Code Agent Workflows
- TDD & High-Throughput Benchmarking

Personal Profile

I have always had a keen interest in all things technology related. Developing software is not just a career for me—I strive to advance my skills both inside and outside of work. Utilising agile software practices alongside working within a collaborative team is key to building great software. Motivated by complex technical challenges, high-throughput data processing, zero-reflection compile-time performance, and agentic workflows.

Employment History

May 2019 - Present	Software Developer (Senior / Principal) Sentric Music • Architected and built large-scale royalty processing systems scaling to billions of records, leading Apache Iceberg adoption and Python data engineering tooling. • Spearheaded long-term technology strategy to migrate legacy .NET Framework applications using a two-tier approach: extracting common components into modern .NET and creating a Storybook-driven React design system backed by REST APIs. • Pioneered AI Code Agent workflows across the engineering team, optimizing developer experience and bridging software design with autonomous tooling. • Introduced centralized observability via Serilog, Elastic Stack, and OpenTelemetry (OTEL) for real-time monitoring of high-volume event pipelines. • Migrated enterprise source control and CI/CD pipelines to GitHub Actions and codified infrastructure using Pulumi for AWS resource management.
Nov 2017 - May 2019	Software Developer (Professional / Senior) Zuto • Engineered high-availability cloud lender integrations on AWS, maintaining and modernizing scalable fintech services with strict observability standards.
Jul 2014 - Nov 2017	Software Developer (Placement / Graduate) AutoCoding Systems Ltd • Built packaging line automation software deployed to factory floors worldwide, developing critical features for the automated date and code printing engine.

Education

2012 - 2016	BSc Computer Science with a Year in Industry University of Liverpool First Class Honours Final year dissertation on 3D procedural maze generation with statistical graph analysis, built in Unity 3D with C#, SOLID, and TDD practices.
2010 - 2012	A-Levels Computing (A), Chemistry (A), Mathematics (B) Carmel College
